KEY FEATURES

- ✓ Environmentally friendly - Biodegradable
- ✓ High durability
- ✓ Diverse colors
- ✓ Affordable price

ABOUT NON-WOVEN FABRIC

WHAT IS IT?

It is a type of fabric made from synthetic plastic particles (usually polypropylene) combined together by thermal or chemical methods without going through the traditional weaving process.

The “GOLD STANDARD” for quality

- **Biodegradability:** Non-woven fabrics can decompose in the natural environment within 1-5 years (instead of hundreds of years like plastic) and do not produce harmful substances when they break down.
- **Reusable multiple times:** Their thickness allows users to wash and reuse them many times without deformation.

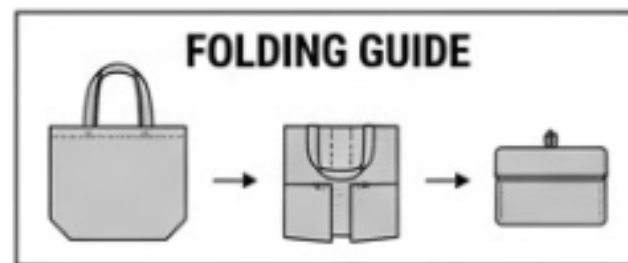

FOLDABLE NON-WOVEN BAG
